

TITAN II

*Titan II shown with optional equipment

Strength and Good Looks

Glaval Bus' TITAN II payload is a quiet, comfortable, durable steel frame ride for a variety of shuttle services. With a full range of floor plans for up to 21 passengers, the TITAN II is versatile, economical and flexible enough to suit a wide variety of applications for the mid-size buses in your fleet.

Built with a 6.6L Duramax Diesel or 6.0L gas engine and combined with "Steel-Safe" construction, the TITAN II delivers durability and strength. Passenger compartments are surrounded by ribs of steel, and then covered with a galvanized steel skin for additional safety to ensure your passengers travel in solid, quiet comfort.

Clean style with reliable, rugged synergistic design and an interior put together with remarkable fit & finish. The result is a vehicle that is built to last and compliments the reputation and image of its owner and operator.

"Steel-Safe" construction wraps passengers in strength and comfort. The subfloor of welded square tube steel is covered with 5/8" pressure-treated MarineTech plywood. A welded steel cage frame is filled with solid-block dense foam insulation and vacuum-laminated to a galvanized steel exterior skin and an interior wall of vinyl-covered lauan for the side and rear walls that give you the durability and strength you need. Glaval buses have a 5 year/100,000 mile limited warranty.
